Kabeer Joshi

Dehradun, India (Remote) | kabeer786joshi@gmail.com | kabeerjoshi.vercel.app | github.com/kabeerx9 | linkedin.com/in/kabeer-joshi-7173061aa

Experience

Shotgun Fantasy Sports Jun 2025 – Present
React Native Engineer (primary mobile developer, backend contributor) *Remote, US startup*

- Own the Expo iOS and Android app end to end for a daily fantasy sports product in active development, and ship backend features in **Go** and **Django**
- Built the realtime **snake draft**: turn resolution, roster-slot assignment and auto-pick in the app, with versioned room state written atomically to **Redis** in the Go draft service
- Made draft state recover cleanly on **lossy mobile networks**, so reconnecting players rejoin at the correct turn
- Delivered **private contests** end to end: invite deep links in the app, plus contest preparation, settlement and refunds on the server
- Built wallet and checkout flows that only show balances the backend has confirmed, re-checking contest join cutoffs right before charging; added **Clerk** session verification and **Ably** token auth

Goreeva May 2023 – May 2025
Frontend Engineer (occasional maintenance since) *Remote, Ohio, US*

- Delivered the frontend for a K-12 school platform across three **React Native** apps and a **React/TypeScript** dashboard, live on the App Store and Google Play
- Designed a multi-tenant, role-based dashboard with navigation driven by **20+ permission keys** and lazy-loaded code splitting across **80+ views**
- Engineered printable report cards with dynamic grading schemes and bulk student editing, replacing a manual paper workflow
- Built shared infrastructure reused by every app: token-refresh auth, an API layer with retry and error boundaries, crash monitoring and push notifications
- Built a parent app with on-device speech recognition and a state-machine chatflow for voice navigation in Hindi and Marathi

Projects

Caretalk | *TypeScript, MCP, Postgres*

- Health memory you talk to: plain-language updates become dated facts, with an MCP server so Claude can read and write them

Decio | *Expo, Go, Postgres, Ably*

- People-first city network with profiles, connections, city posts and realtime direct chat

Tattwix | *React, Expo, Django*

- Polyglot monorepo where a React web app, an Expo app and a Django API share typed contracts and validated env config

Technical Skills

Mobile and web: React Native, Expo, React, TypeScript, JavaScript, Next.js, Swift/SwiftUI
State and realtime: Zustand, Redux, WebSockets, Ably, state machines, optimistic updates
Backend and data: Go, Django, Node.js, Postgres, Redis, Prisma, REST APIs, Clerk, JWT
Tooling: EAS, Sentry, Firebase, GitHub Actions, Vercel, Docker, Claude Code

Education

Thapar Institute of Engineering and Technology Patiala, India
B.E. Computer Science, GPA 7.21 *2019 – 2023*
